

LIVERFAST™

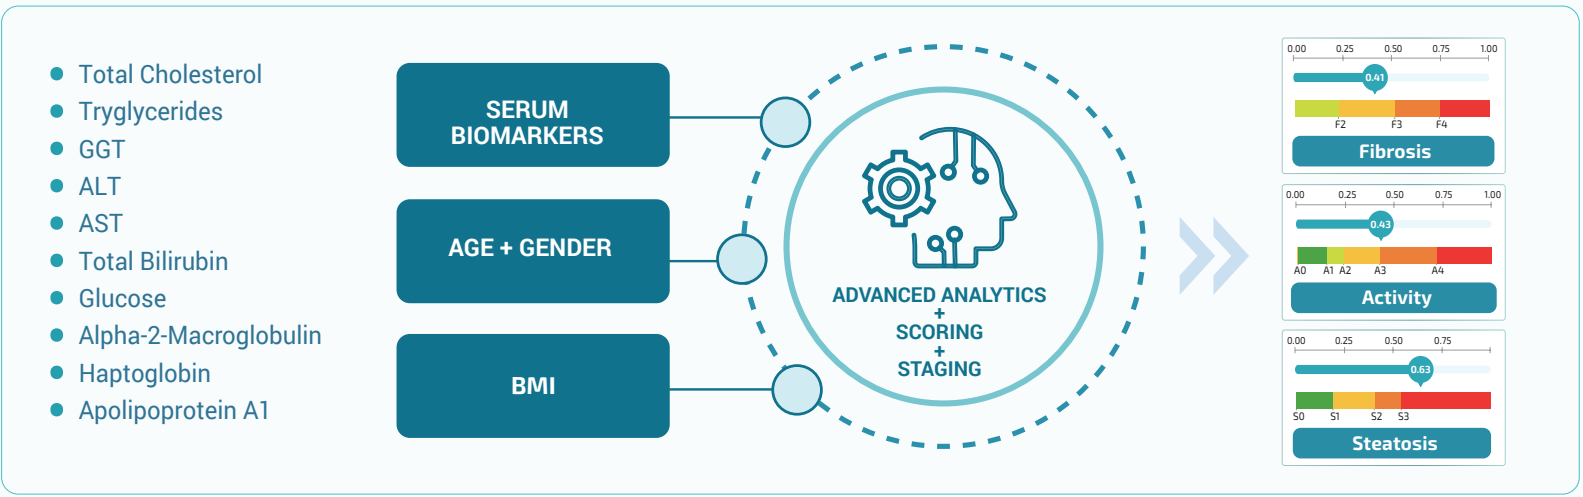

A Comprehensive MASLD/MASH Solution

SIMPLE AND EASY TO DO

- 01** Physician prescribes LIVERFAST
- 02** Lab analyzes 10 biomarkers from 1 blood sample
- 03** Biomarker values plus age, height, weight and gender entered into platform
- 04** LIVERFAST results available immediately

1 BLOOD DRAW ► 3 SCORES ► 5 ADVANTAGES

LIVERFAST Performance Drives Improved Clinical Paths

SUPERIOR 2-STEP NIT CLINICAL PATHWAY

LIVERFAST followed by Fibroscan finds more patients, increases certainty and decreases churn.

WIN FOR PCPS

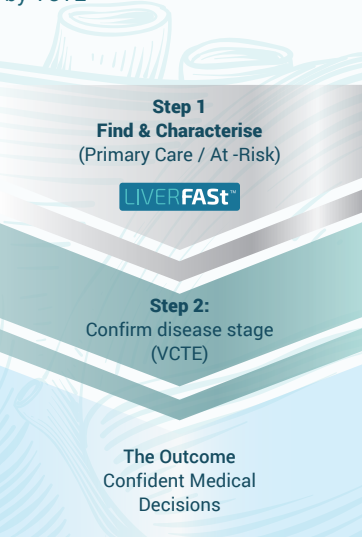

Safely rules-out F0-F1 patients with certainty. Identifies more \geq F2 patients with greater certainty

WIN FOR PATIENTS

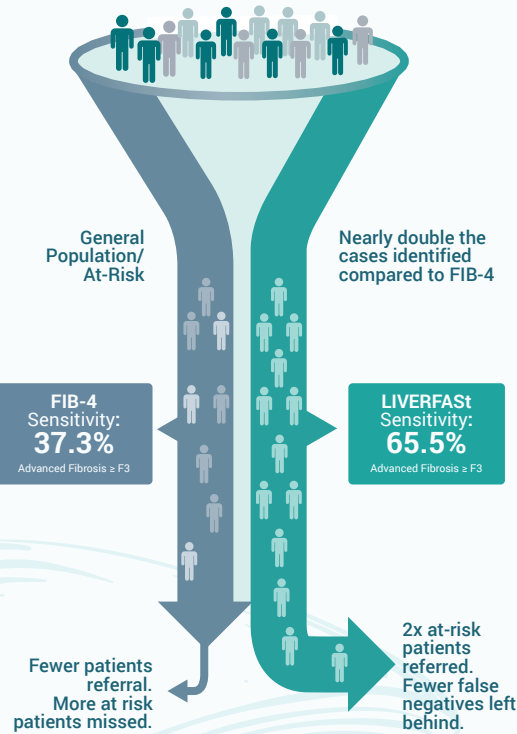

An easy to do test with results that are clear and actionable.

WIN FOR SPECIALISTS

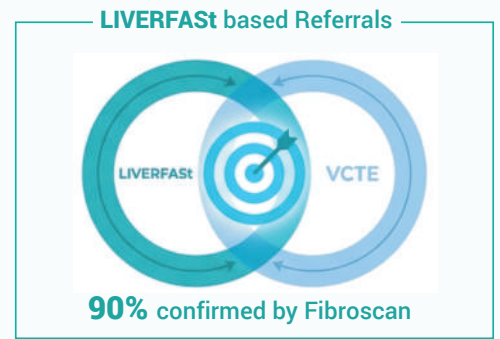

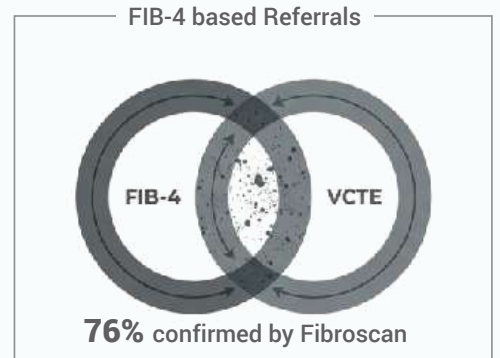

More and better qualified \geq F2 patients, more likely to be confirmed by VCTE

LIVERFAST sees more, finds more.

More patients + higher concordance with Fibroscan

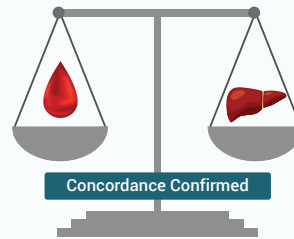

LIVERFAST-Fibroscan Combo Put to the Test

Biopsy confirms LIVERFAST-Fibroscan concordance over 95% of the time.

Biopsy Confirmation

When LIVERFAST and Fibroscan (VCTE) results are concordant, biopsy confirms the staging in ~95% of cases, demonstrating very high accuracy.

For ruling out advanced fibrosis (\geq F2), concordance provides near certainty, reducing the need for biopsy in these cases.

High Confidence Pathway

Concordance results confirmed by biopsy provide confidence and actionable results

Doctors can rely on the combined accuracy to manage patients, knowing that if LIVERFAST and Fibroscan agree, it is conclusive and true, minimizing unnecessary procedures.

CLINICAL PATHWAY

Part of Fibronostics' complete liver care framework:
Screening | Monitoring | Clinical Pathway |
Ease of Use | **Identification**

WHY CLINICAL PATHWAYS MATTER

Efficient liver care requires the ability to:

- 01 Stratify patient risk
- 02 Prioritize specialist referrals
- 03 Reduce unnecessary procedures
- 04 Optimize use of diagnostic resources
